

SCHOOL TESTING RESULTS, 2006 & 2007

HOW UTAH COMPARES TO OTHER STATES

HIGHLIGHTS

- Utah students as a whole typically achieve around the national average on standardized tests. However, Utah's demographic characteristics suggest it should score much higher than the national averages.
- States with similar student poverty levels, parental education levels, and ethnic profiles score much higher than Utah in 8th grade math, reading, and science tests administered through the National Assessment of Educational Progress (NAEP). Utah is the lowest-achieving state in its overall demographic peer group.
- If Utah performed in the middle of its demographic peers, Utah would rank in the top 10 states nationally in science and in the top 15 in math and reading.
- Something is limiting Utah's ability to perform at a level that would be expected for a state with its demographic profile. With per-pupil funding \$3,000 lower than its peer-group average, financial limitations are a likely limiting factor. More research is needed to pinpoint the most likely limiting factors.
- This report also includes school-by-school listings of test scores from the Iowa tests administered to Utah 3rd, 5th, 8th, and 11th grade students for the past two years.

The mission of Utah Foundation is to promote a thriving economy, a well-prepared workforce, and a high quality of life for Utahns by performing thorough, well-supported research that helps policymakers, business and community leaders, and citizens better understand complex issues and providing practical, well-reasoned recommendations for policy change.

Since 1990, Utah Foundation has analyzed the results of national standardized tests administered to Utah school students. This report provides these test scores for each Utah public school and district. It also analyzes other tests that allow comparison of Utah to its demographic peers.

Previously, these reports examined the results of the various editions of the Stanford Achievement Test. However, the Iowa Test of Basic Skills has now replaced the Stanford tests as Utah's norm-referenced test. These norm-referenced tests compare Utah students to an estimate of what the average American student at that grade level would score on that exam.¹ To determine these national averages, or norms, the testing companies administer the tests to groups of students that are selected to represent the nation.

The Iowa tests differ from Utah's CRTs (criterion-referenced tests) given to students at the end of each school year. CRTs measure students against defined academic standards, which are used for accountability in state education and for "No Child Left Behind" reporting requirements.

In addition to providing and analyzing the results of the Iowa test, this report will also take a new look at another group of tests that compare Utah directly to other states. The purpose of this analysis is to show how Utah compares against the states that are most similar to Utah in demographic terms.

This comparison will use results from the National Assessment of Educational Progress (NAEP), which collects data on academic performance in the context of demographic and other factors. As opposed to the Iowa tests, which report percentile ranks, NAEP provides results in terms of average scores by state, region, and by various factors, such as demographics. A battery of tests is administered periodically to 4th, 8th, and 12th graders as a measure of academic progress.

NAEP tests a number of subject areas and collects demographic data from test takers. By examining the demographic data collected by NAEP, states that are similar to Utah demographically can be identified and compared. By comparing Utah to its demographic peers, we can obtain a better sense of how Utah is performing academically than by only comparing Utah to the national average or using percentile ranks, as with the Iowa tests.

COMPARING UTAH TO STATES WITH SIMILAR DEMOGRAPHICS

When compared with measures of national academic performance, such as standardized tests, Utah often scores near or slightly above average. While this can be interpreted as a

sign that Utah students are performing at or above “par,” the national averages can be misleading in some respects.

Educational research demonstrates that non-school factors have a large impact on students’ academic achievement. For example, a 2003 meta-analysis conducted by one of the U.S. Department of Education’s Regional Educational Laboratories concluded that student characteristics, as opposed to school-level and teacher-level factors, account for 80 percent of the variance in student achievement.²

If the student populations of two states differ with respect to student characteristics related to achievement, a straightforward comparison of the achievement levels of the two states can be misleading. In order to compare the effectiveness of state public school systems, then, it is important to consider differences outside of the control of the public schools that nonetheless significantly affect student achievement.

Student characteristics such as family income, the education level of parents, and ethnicity are each significantly correlated with academic performance and must be taken into account in research on academic achievement. Researchers suggest that wealthier and more educated parents provide children with academic advantages because they are more likely to be involved in their children’s schools, more likely to read with children, help with homework, communicate high academic expectations, and because they act as role models for academic achievement.³

Educational research on the achievement gap between Whites and minorities demonstrates that ethnicity influences academic achievement, even after disadvantages associated with family income and parental education level have been taken into account. Researchers suggest that ethnicity influences academic achievement due to the fact that minorities more often attend schools of concentrated poverty, because of the unequal distribution of school resources (including teacher quality), and due to institutional barriers such as low expectations and a deficit view of minority children.⁴

Utah has significant demographic characteristics that should lead to high test scores, rather than merely average performance. Therefore, it is important to compare Utah to states that also have similar economic, educational, and ethnic populations and thereby have similar expected academic performance.

To determine Utah’s peer states, three demographic factors, collected from the NAEP results, were considered: the percentage of students eligible for the free or reduced-price school lunch programs (a common measure of poverty in academic settings), the percentage of students with at least one parent who graduated from college, and the ethnic makeup of a state, measured by the percentage of White students taking the NAEP exams.

The eight states that were closest to Utah according to those factors (the four states immediately above and below Utah, in terms of percentages) were then selected for comparison. These statistics were obtained from NAEP results for 8th grade students in 2007 and 2005. The subjects chosen were mathematics and reading for 2007, and science for 2005, the latest available tests for these subjects.

STATES WITH SIMILAR POVERTY RATIOS

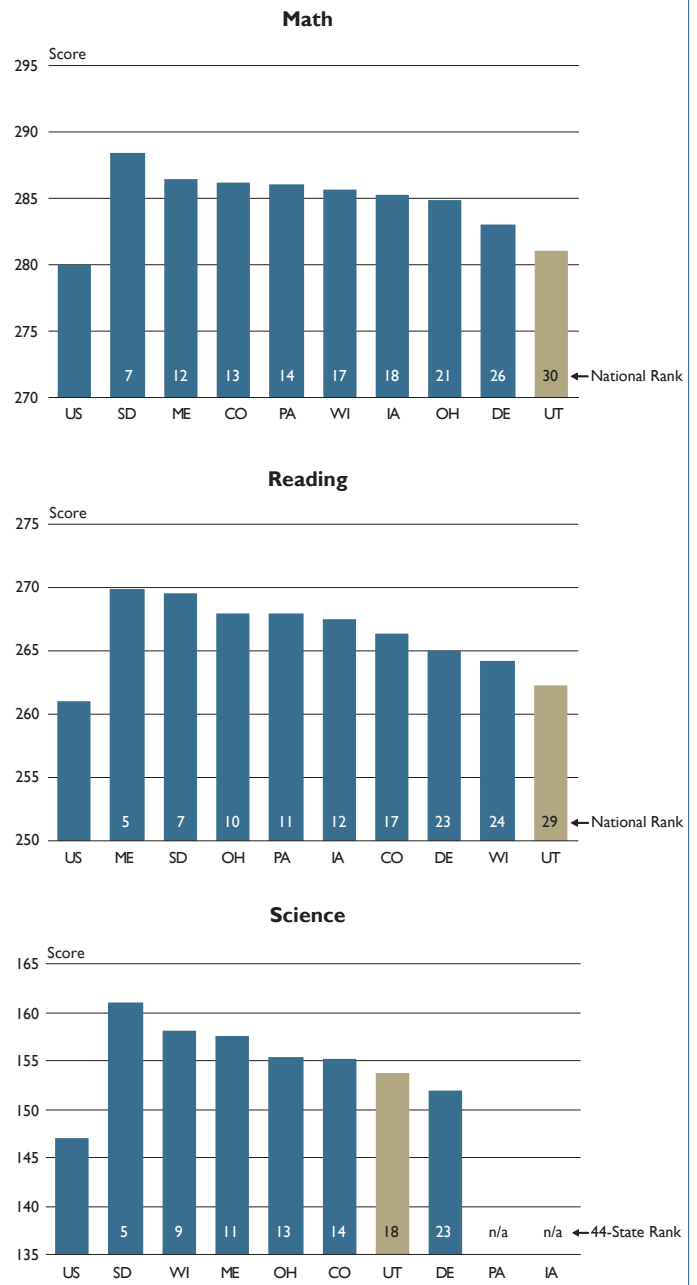

Utah benefits from a fairly low student poverty rate, the 13th lowest rate in the nation for the percentage of students eligible for free or

Figure 4: States with Similar Parental Education Levels and Their Performance on 8th Grade NAEP Math, Reading, and Science Tests

Source: NCES, using 2007 NAEP math and reading assessments and 2005 science assessment.

reduced-price school lunch. Figure 1 shows the states most similar to Utah. The scores of these peer states on the math, reading, and science tests are shown in Figure 2.

These are generally high-scoring states, with an average national rank of 16th in math, 14th in reading, and 13th in science. Utah scored the lowest among these states in math and reading, ranking 30th in the nation for math and 29th for reading. In the science test, Utah performed better nationally and within the peer group, ranking 18th in the nation.

STATES WITH SIMILAR PARENTAL EDUCATION LEVELS

Utah has the 9th highest rate of students with at least one parent who graduated from college. The states which were most similar to Utah are shown in Figure 3. Figure 4 show the scores of this peer group of states by subject.

These states are high performers, with four of them scoring in the top 10 states for math, reading, and science. Again, Utah's math and reading scores were the lowest among these peers, while its science scores were below the peer average but not the lowest. In this peer group, Iowa and Nebraska did not report science scores.

STATES WITH SIMILAR ETHNIC PROFILES

Utah has the 11th lowest proportion of ethnic minority students among the states. The states most similar to Utah are shown in Figure 5, with their scores on each test shown in Figure 6.

These peer states had an average national ranking of 16th in both math and reading and an average science rank of 9th. Utah ranked second lowest among these peers on each test, with only Kentucky scoring lower. Kentucky suffers from a very low proportion of college-graduate parents and a high poverty rate, yet its test scores and rankings are very close to Utah's.

UTAH'S OVERALL DEMOGRAPHIC PEERS

Those states that were Utah's peers in at least two of the three demographic factors described above were chosen as Utah's overall demographic peers. These most similar states were Iowa, Montana, Nebraska, South Dakota, and Wisconsin.

Figure 7 shows how Utah compares to each of these states in the NAEP 8th grade math, reading, and science tests. Science scores were not available for Iowa or Nebraska. The common finding in each graph is that Utah falls well below its demographic peers in each of the tests. Indeed, Utah is the lowest scoring state among these peer states.

CONCLUSIONS ABOUT THE NAEP DATA

It is important, when reviewing the results of national tests such as NAEP, to compare "apples to apples." When Utah is compared to states which have more poverty, less-educated parents, and higher ethnic diversity, it is clear that Utah will seem to perform relatively well. However, when compared to other states that have similar demographic characteristics, it is apparent that Utah does not perform as well as expected.

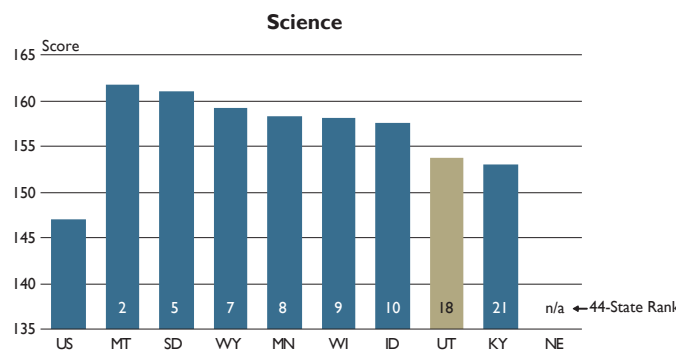

If Utah ranked in the middle of its peer states, it would achieve in the top 10 or 15 states in the nation in math, reading, and science scores. In order to perform in the upper half of its peers, Utah would need to have scores near the top in the nation. Even in science, where it ranked 18th, Utah still was near the bottom of its peer group.

Clearly, something is limiting Utah's ability to perform at a level that would be expected with its demographic profile. One possible limiting factor is the significantly lower resources available to Utah's education system on a per-pupil basis. Utah's overall peer states shown in Figure 7 had an average 2005 per-pupil spending of \$8,251, which is \$3,000 per pupil more than Utah.⁵ Nevertheless, within this group of peers, the highest spenders are not the highest achievers. South Dakota, for example, is closer to Utah in per-pupil spending than the other peers but ranks within the top seven states nationally on each of the tests. Even so, South Dakota's spending was more than \$1,900 per pupil higher than Utah.

Other limiting factors could include teacher quality and training, curriculum differences, or even other non-school factors such as cultural attitudes toward educational achievement. More research is needed to try to pinpoint which factors may contribute the most to Utah's poor rankings among these peer states.

COMPARISON OF IOWA CORE-SUBJECT TEST SCORES

The Iowa Tests of Basic Skills (used in Utah for grades 3, 5, and 8) and the Iowa Tests of Educational Development (used in Utah for grade 11) provide another look at Utah's academic performance, including a breakdown of results by subject, grade and ethnicity. Figure 8 shows these results as percentile ranks for the core subjects of math, language, and reading, along with composite results, which are an average of the core subjects plus science and social studies.

In all grades and in all subjects, White and Asian ethnic groups in Utah had higher scores than their classmates of different ethnic groups and higher than the national average for all students. In most cases, Whites and Asians also scored higher than the state average for all students.

On the other hand, in almost all cases, the scores of American Indian, Black, Hispanic, and Pacific Islander ethnic groups in Utah were well below both the state and national average for all students

combined. Hispanics and American Indians generally had the largest achievement gaps compared to White students.

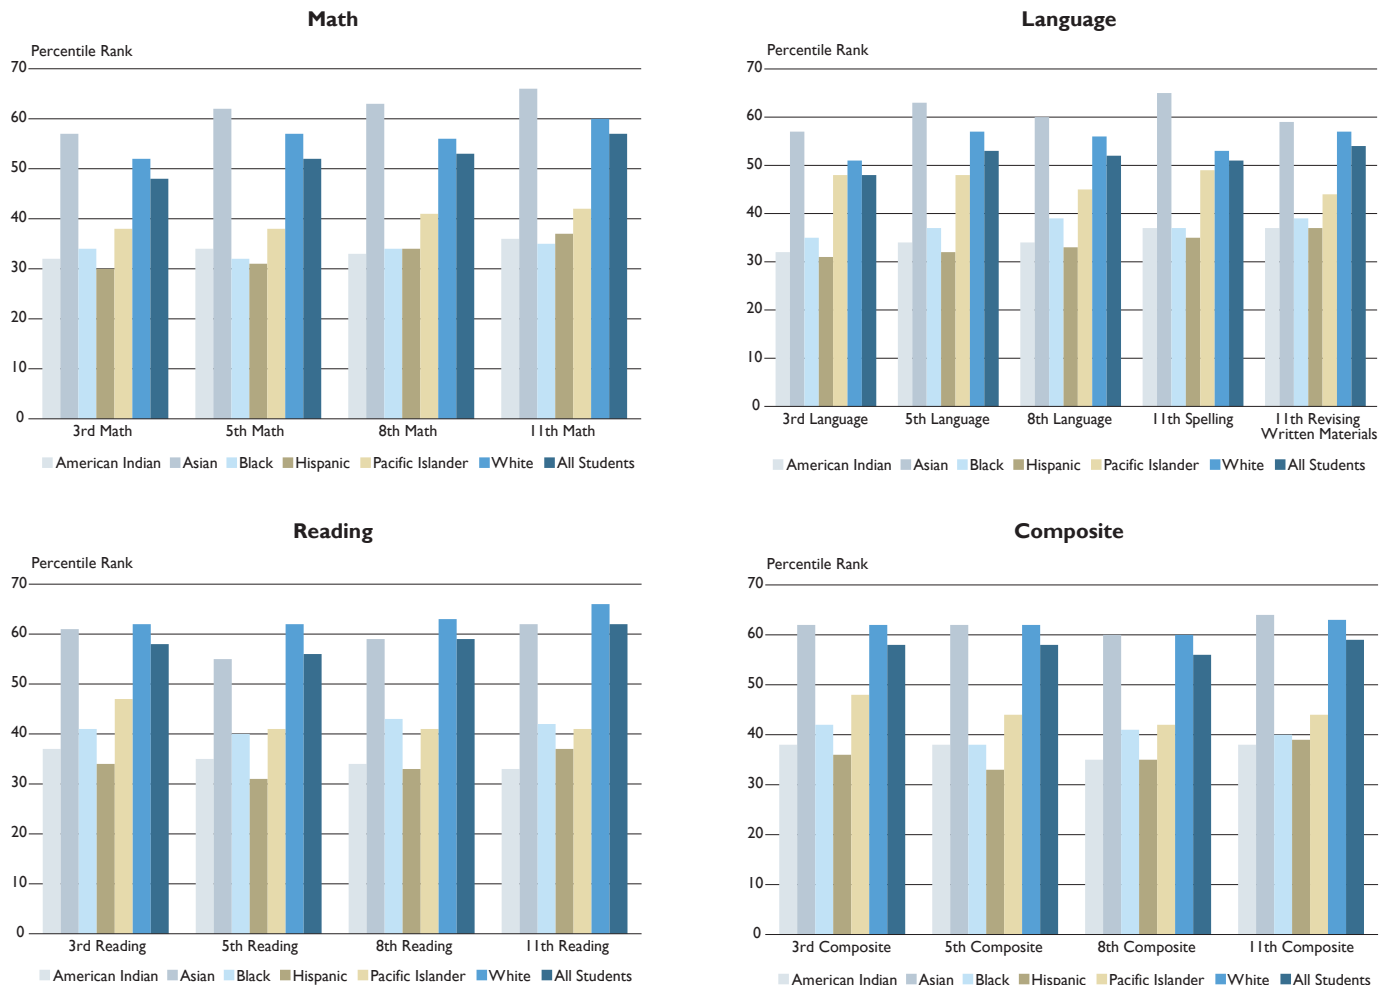

The statewide scores for all students combined are, in most cases, at or above the national averages, although Utah third graders scored below the 50th percentile in math and language. With this Iowa test data, it is not possible to compare Utah to demographic peer states as was done above with the NAEP data. NAEP does not provide individual school or district test results, but the Iowa data is useful in making state, district, and individual school comparisons to national averages.

IOWA TEST SCORES FOR INDIVIDUAL UTAH SCHOOLS

In addition to providing statewide results, the Iowa tests also provide the national percentile ranks for each individual school in Utah, sorted by district and year. The appendix tables in this report show these results for all of the Iowa subject tests administered in the fall of 2005 and 2006 (school years 2006 and 2007, respectively).

The Iowa test examines 3rd, 5th, 8th, and 11th graders in reading, language, math, social science, and science. Results are reported in terms of percentile ranks across the nation, rather than in terms of test scores. The results allow an analysis of how individual Utah schools compare to each other and to schools nationwide.

Figure 8: Iowa Test Results for Utah Public Schools, 2007 School Year

Source: Utah State Office of Education.

One caveat concerning the Iowa test data is that **the norm groups used in the testing changed between the 2006 and 2007 school years. This means that, although scores are reported for all subjects in both years, comparisons between the years cannot be made.** Nonetheless, each school can be compared within a given year to other schools in Utah and across the nation for that same year.

Another concern must be noted about the student statistics reported with these Iowa test data. The appendix tables include a column showing the percent of low-income students at each school and district. This is measured by the percent of students eligible for free and reduced-price lunch at each school. The most recent data from the 2007 school year were found unreliable, with very large changes from the 2006 data which seem to be caused by district reporting errors. Utah Foundation determined that the 2006 data presented a more accurate count of low-income students and used those figures in the tables. For schools that did not exist in 2006, the low-income data is not available.

Finally, some small schools had too few students taking the tests to allow reporting of the results. To preserve privacy, the Utah State Office of Education's policy is not to report any results in groups smaller than 10 students. These are shown with three asterisks in the columns that cannot be reported.

* Students Tested are from 2007. % Low Income is from 2006 (see page 6).

** 2006 and 2007 scores are NOT comparable as a time series, because a new national norm group was created in 2007.

*** Fewer than 10 students (cannot report).
